SECTION – A	
1	<p>Read the passage and answer the following questions:</p> <p>A volcano is a mountain formed through an opening on the Earth’s surface and pushes out lava and rock fragments through that. Most of the time, it looks like any other mountain, but now and again it throws out ash, gas and burning rock. This is called an eruption. The melted hot rock that erupts is known as lava. Lava comes out slowly and gas comes out in puffs. The poisonous gases also make it hard to breathe, and the burning lava destroys farms, villages and roads. Volcanoes can be active (erupt often), dormant (erupt very rarely) or extinct (will never erupt again). Volcanoes also erupt under the sea! Some people live on active volcanoes, because the ash that they throw out makes the soil good for farming. The rocks around active volcanoes are very hot and people use this heat to warm their homes, schools and swimming pools.+</p> <p>a) How is a volcano formed? b) Why do some people live on active volcanoes? c) Find the synonym of the word ‘inactive/sleeping’ from the passage.</p>
