The Expert's View

Venue: JMIS

*A workshop was conducted under the JMS-mentor program by Mr. Virendra Srivastava for class 11th and 12th biology students. In 12th class the topic under discussion was genetics. Students asked their problems related to linkage of genes. The discussion was followed by an experiment to verify the F1 ratio stated in Mendel's experiment. The experiment was done using marbles of different colours! Students were surprised to see an activity included in topic like genetics! Class 11th discussed the topic photosynthesis with Sir. Some brain storming questions were asked during the session which the students enjoyed asking. He also gave the simpler version of C3 cycle which is very helpful for the students.*
