

Learning Impact Study
(For Class VIII, Class IX & Class X)

Bloom Public School in partnership with IL&FS Education has initiated a Learning Impact Study, focused on technology usage for education. IL&FS Education is one of the leading organisations with unique & diverse expertise in delivering education and technology services.

The objective of the Learning Impact Study is to check on the observable & measurable outcomes achieved by technology usage in education, with respect to:

- **Academic Enrichment** Student would have a better understanding of concepts and hence would show better performance (marks) at examinations
- **Academic Engagement** Student develops interest, responsibility and self-discipline for studies; which would be seen as less stressed & more participative students; with better performance at examinations

The students will be provided free access to specific e-learning content for all students of Classes 8, 9 & 10. The study will include high-end training workshops for teachers to learn new methodologies around technology usage in classroom. At some stage, the study will require observations/feedback from the parents and we would be calling on a few of the parents for a focused group session.
