

Outreach Program on
Entrepreneurial Skill Development for Schools

Under the aegis of DBT Star College Scheme

Organised by

Chemistry Department, Hindu College

In collaboration with

Anthelia: Environment Council of ITL Public School

On the 31st of July, 2024, Hindu College, in collaboration with Anthelia, the environment council of ITL Public School, successfully organized an outreach program on entrepreneurial skill training for school students. This initiative was conducted under the aegis of the DBT Star College Scheme and aimed to foster an entrepreneurial mindset and a strong interest in science among the participating students.

The event commenced with an introductory session on Skill and Entrepreneurship by Dr. Devanshi Magoo from Hindu College who introduced the students to importance of skill training. Dr. Vaishali Mishra Head of the Chemistry Department from ITL Public School and a CBSE Master Trainer shared insightful information about the various products developed by the students at ITL Public School. She elaborated on the entire process from production to packaging and marketing, providing the school students with a comprehensive understanding of entrepreneurial skills. The participating students were very enthusiastic and keen to learn new things. Their interactive nature made the sessions lively and engaging, demonstrating their eagerness to absorb new knowledge and skills.

Following the conference, the students moved to the science lab for an engaging hands-on session, where students excitedly prepared handmade natural hand sanitizers and effective mosquito repellents under the guidance of Dr. Vaishali Mishra. They not only prepared these products themselves but also packaged them, experiencing the full cycle of product creation.

Dr. Mishra further enlightened the students about the strategies involved in marketing the products they had made, thereby completing their entrepreneurial training. This outreach program was designed to provide the students with practical knowledge and hands-on experience in both scientific experimentation and business skills.

The program was a resounding success, achieving its goal of inculcating an entrepreneurial mindset and sparking a keen interest in science among the school students. The collaboration between Hindu College and ITL Public School, supported by the DBT Star College Scheme, showcased the power of educational outreach in shaping the future of young minds.
