

## International Day of Biological Diversity

**DATE:** MAY 22, 2025

**Classes Involved** – VI-XII

**Conducted by** –Science Department

**VENUE:** ITL PUBLIC SCHOOL, SEC 9, DWARKA.

“Biodiversity resources are the pillars upon which we build civilizations.”

Our planet is teeming with incredible life, from the tiniest insects to the largest whales. ITL Public School celebrates The International Day for Biological Diversity, a global event, on May 22, 2025. This International Day for Biological Diversity, under the theme “Harmony with nature and sustainable development”, serves as a reminder of the importance of biodiversity and the need for collective action to protect it. From vibrant coral reefs to lush rainforests, every species plays a vital role. Students planted saplings to support biodiversity and ecological balance. The students of classes VI-XII participated in plantation drive which aimed to instill a sense of urgency that we must act now to meet both the near-term targets of the Global Biodiversity Framework and the SDGs. It also emphasized upon importance of biodiversity for our health, our food security, a stable climate and is a global asset of tremendous value to future generations. Let's take a moment to appreciate the intricate connections within nature and think about how we can all contribute to protecting this vital resource for our future generations. By working together, we can ensure a healthy, thriving planet for future generations to come!
