

WORLD WATER DAY 2025

DATE: 22 MARCH, 2025

ORGANIZED BY: SCIENCE DEPARTMENT

VENUE: ITL PUBLIC SCHOOL, SEC 9, DWARKA

“Each saved drop signifies our dedication to sustain life, nurturing ecosystems, and propelling human progress forward.”

ITL Public School celebrates World Water Day on 22 March 2025 with the aim of spreading awareness about the vital role of water in our lives.

The theme for World Water Day 2025 **“Glacier Preservation”** emphasizes on the need to take urgent steps to combat climate change and protect these natural water reserves. Glaciers are the Earth’s largest source of fresh water, supplying water to millions of people and supporting diverse ecosystems. However, global warming and climate change has accelerated glacier melting, posing serious threats to freshwater availability and increasing the risk of natural disasters like floods and droughts.

Preservation of glaciers will ensure water security, maintaining environmental balance, and sustaining life on earth. On this day, let's highlight the importance of conserving fresh water and encourages it's responsible usage.

Every drop counts!!
