

MUSICAL SPLASH

ACTIVITY: Water Xylophone – Exploring Sound through Play

DATE: 28 July 2025

CONDUCTED BY: PreSchool

Our curious little learners in **Preschool** had a musical morning with a fun-filled **Water Xylophone** activity! Using simple bowls filled with varying levels of water, the children discovered how different amounts of water create **different sounds**.

They tapped the bowls and listened with excitement as each one produced a unique musical note. Through this joyful experiment, they learned that **sound can change based on volume and vibration**, making science come alive in the most playful way.

The **Water Tunes activity** was not only engaging but also supported their **listening skills, observation, and early understanding of sound and pitch**. It was a perfect blend of music, science, and sensory fun!
