

## TORCH TALES

### **ACTIVITY: Shadows Are Fun – A Math & Storytelling Activity**

**DATE: 1 August 2025**

**CONDUCTED BY: Class 2C**

The curious young learners of **Class 2A** had an exciting time exploring the magical world of **shadows** through a fun-filled **Math and storytelling activity** titled "**Shadows Are Fun**". Inspired by the traditional **Togalu shadow puppetry**, students discovered how shadows are formed and how their size and direction change with light.

Using **simple tools like a handkerchief and a mobile torch**, children experimented with creating shadows on the wall, turning the classroom into a mini theatre of light and imagination. As they moved objects closer or farther from the light source, they observed changes in shape and size—turning science into an interactive and visual experience.

The activity beautifully combined **concepts of light, measurement, and storytelling**, making learning both **fun and meaningful**. It sparked curiosity, creativity, and a deeper understanding of everyday phenomena—proving once again that **learning through play leaves a lasting impression**.
