

FUN WITH SCIENCE

ACTIVITY: Experiment: Sink or Float?

DATE: 20 August 2025

CONDUCTED BY: Prep Classes

The Prep students turned into little scientists as they explored the exciting experiment “**Sink or Float?**”. With great enthusiasm, they predicted and tested whether everyday objects such as **leaves, pebbles, crayons, coins, erasers, twigs, pencils, and wooden pieces** would sink to the bottom or float on water.

The hands-on activity not only filled the classroom with excitement but also nurtured the children’s **curiosity and critical thinking skills**. By making predictions and then checking the results, the young learners gained a **deeper understanding of scientific concepts** in a fun-filled way.

Through this playful experiment, the children learnt to **observe, compare, and reason**, making science an enjoyable and memorable experience for them.
