

FRACTION EXPLORATION

ACTIVITY: Exploring the concept of Fractions

DATE: 15 October

CONDUCTED BY: Class 4B

Students of Class 4B had a fun and interactive session exploring the concept of **fractions**. Using paper plates, they divided them into equal parts to represent different fractional values, allowing them to **visualize fractions as parts of a whole**. This hands-on activity helped students understand **numerators and denominators** more clearly and relate fractions to **real-life situations**, such as sharing food or dividing items equally among friends. The activity not only reinforced mathematical concepts but also made learning **engaging, practical, and memorable**.
