Assertion: Crocodiles make a nest for their eggs on the ground.

Reason: They take care of their young ones.

A

A is true but R is false.

B

A is false but R is true.

C

Both A and R are true and R is the correct explanation for A.

D

Both A and R are true but R is not the correct explanation for A.

Q5. Assertion & Reasoning based question:

Assertion: Frogs lay many eggs in water like fish.

Reason: Their young ones are called fry.

A

A is true but R is false.

B

A is false but R is true.

C

Both A and R are true and R is the correct explanation for A.

D

Both A and R are true but R is not the correct explanation for A.

Q6. Read the following passage carefully and answer the following.

All animals have a reproduction cycle to produce their young ones. Some animals, like cows and dogs give birth to babies while others like birds and reptiles lay eggs. The young ones grow and develop into adults and this cycle continues. This process helps animals to maintain their population and ensures that their species does not disappear from the earth. Eggs of whale shark fish are the largest underwater eggs in the world.

a) Why reproduction is necessary?

b) Eggs of _____ fish are the largest underwater eggs in the world.

c) Some birds and reptiles lay eggs. **(True/False)**
