

## CHARGE UP YOUR MATH SKILLS!

### **ACTIVITY: Math Buzz Activity - Battery Subtraction**

**DATE: 3 December 2025**

**CONDUCTED BY: Class 2A**

Class 2A participated in an exciting **Math Buzz** activity that introduced subtraction in a fun and relatable way—through the idea of **battery consumption on mobile phones!**

Students selected any number between **59 and 99** to represent their phone's battery percentage. They then subtracted the battery used while 'playing games,' helping them understand **two-digit subtraction** in a creative and meaningful context.

This hands-on approach not only strengthened their subtraction skills but also made learning enjoyable and connected to real-life situations. The activity sparked curiosity, engagement, and quick thinking among all students.
