- (i) moon (ii) satellite (iii) sun (iv) earth

3. People who study _____ are known as astronomer.

- (i) Sky (ii) full moon (iii) stars (iv) all of these

Q2. Write 'T' for True and 'F' for False statements.

1. Stars have light of their own.

2. Full moon night is also called Amavasya.

3. There are 198 known constellations.

Q3. Define constellations.

Q4. Why does our earth looks like a 'blue marble' from the space?

Q5. Assertion and Reasoning Based Question:

Assertion: The sun is like a huge ball of fire.

Reason: It is the ultimate source of energy.

A

A is true but R is false.

B

A is false but R is true.

C

Both A and R are true and R is the correct explanation for A.

D

Both A and R are true but R is not the correct explanation for A.

Q6. Read the following and answer the questions.

Moon is our nearest neighbour in the sky. We call Moon a satellite of earth because it moves around the earth. It is dry and barren. It has no air or water. It has no light of its own. It shines because it reflects the sunlight which falls on it. At night, when the shape of the moon appears like a disc, it is called as the full moon. Full moon reappears in almost a month.

Q1. Why life is not possible on moon?

Q2. _____ reappears in almost a month.
