

BIOLOGY MEETS TECHNOLOGY

ACTIVITY: Google Forms: A Step Towards Interactive Learning

DATE: 21 April 2026

CONDUCTED BY: Class X-B

Students of Class X B embraced a modern approach to learning by utilizing **Google Forms** to complete their biology assignments. This seamless integration of technology with academic concepts provided an engaging and efficient platform for students to demonstrate their understanding while enhancing their digital skills.

The activity encouraged students to interact with biological concepts in an innovative manner, making the learning process more dynamic and accessible. Through the use of digital tools, students were able to respond, reflect, and apply their knowledge in an organized and interactive format.

In addition to reinforcing subject understanding, the assignment helped students develop technological proficiency, an essential skill in today's digital world. The initiative highlighted the importance of integrating technology into education to promote active participation, independent learning, and effective knowledge application.

The activity successfully combined scientific learning with digital innovation, creating a meaningful and future-ready learning experience for Class X B.
