

TUBERCULOSIS AND MALARIA AWARENESS DRIVE

EVENT: Class XII Students Lead Health Awareness Campaign

DATE: 27 April 2026

CONDUCTED FOR: Classes VI-XI

An awareness drive on **Tuberculosis (TB) and Malaria** was conducted for students of Classes VI to XI by the students of Class XII. The initiative aimed to educate students about these common yet preventable diseases and promote awareness regarding their causes, symptoms, prevention, and treatment.

Through informative presentations and interactive discussions, the Class XII students shared valuable information about the importance of early diagnosis, maintaining good hygiene, preventing mosquito breeding, and adopting healthy lifestyle practices. They also highlighted the significance of seeking timely medical attention and following preventive measures to reduce the spread of these diseases.

The session encouraged students to become more health-conscious and informed about public health concerns. The awareness drive not only enhanced their knowledge but also empowered them to share these important messages with their families and communities.

The programme proved to be both educational and impactful, fostering a sense of responsibility towards personal and community health while promoting preventive healthcare practices.
