READING

Q1. Read the passage and answer the questions that follow.

Miss Roshanar is my class teacher. She teaches English and History and makes the lessons so interesting that I have come to love these subjects a lot. Miss Roshan, as we like to call her, is always smiling and ever patient. She is always willing to answer questions and does not get angry if we ask her to explain some concepts more than once in class. She is also very approachable. She is very well-educated with a post-graduate degree from the University of Delhi and teacher's training degree as well. I must say that her way of teaching is very different from others; it is simply fascinating how she always asks the opinions of the students in class and tries to make every class into an interactive session. We love that about her style of teaching as it allows us to voice our ideas and opinions freely.

a) Who is the narrator's favourite teacher?

b) What does it mean when the narrator says that Ms. Roshan is very approachable?

c) Why does the narrator say that he/she has come to love English and history?

d) How is her teaching style different from others?

e) Why does the narrator like her style of teaching a lot?

f) Find the synonym of the word 'friendly' from the passage.

g) Find the antonym of the word 'boring' from the passage.

Q2. Read the passage and answer the questions that follow.

Everything that we see around us happens to be matter and material is something out of which things are made. There are five basic materials and most things around us happen to be made of these five materials.

Metals can be of different types. They are mostly heavy and hard. It usually feels cool to touch. Different types of metals are used to make items of daily use. The spoons and forks we use are made of steel which is made by mixing a metal called iron and carbon. We also use metals to build cars, aeroplanes and railway carriages. This is because metals are very strong.

Next material is glass which is smooth to touch and not as heavy as metals. Glass is hard but not as strong or durable as metals. We use this material to make windows and tumblers. We use glass for windows because we can see through glass.

Wood is a lighter material than metal and glass but much stronger than glass. Wood can be used to make furniture around the house and even to build houses. We get wood from trees in the forests.

Cloth is a very lightweight material. It also happens to be very soft to touch. We generally make clothing from this material.

Another light material is plastic which is used to thin plastic bags as well as light yet hard bicycle helmets.

A. Which sentence from the passage represents the main idea?

- a. We use cloth to make clothing to wear.
- b. Metals are strong and durable.
- c. There are five main or basic materials.
- d. Plastic can be used to make different things.

B. You touch four things, which one will feel like glass?

- a. smooth and cool
- b. warm and soft
- c. light and hard
- d. sharp and heavy

C. Which of these is a material used to make things?

- a. table
- b. wood
- c. bag
- d. door

D. Find the word in the paragraph about “wood” that is the opposite of *heavier*.
