Report on Child Safety

Student groups in Classes 3 to 5 successfully completed a comprehensive interactive learning module on Child Safety. This curriculum-based project focused on equipping students with the essential knowledge to identify hazards and manage personal well-being across school, home, and public environments. Throughout the activity, students learned vital school etiquette, such as **walking in single queues** on staircases, avoiding rough play on the playground, and handling sharp stationery with care. Finally, the program emphasized personal body autonomy by teaching the difference between **safe and unsafe touch**, empowering students to firmly say "No" and immediately **report uncomfortable situations to a trusted adult**.
