

FUN WITH NON-STANDARD UNITS

ACTIVITY: Learning Measurement Through Exploration

DATE: 8 September 2026

CONDUCTED BY: Class 2B

Class 2B explored **non-standard units of measurement** through an engaging hands-on activity. Students were introduced to the concepts of **cubit**, **hand span**, and **foot span** and used them to measure classroom objects, their friends' height, tables, chairs, and other items. The activity helped children understand that measurements can vary depending on the unit used, while developing their observation, estimation, and practical measurement skills.
