MOULDING CONCEPTS INTO REALITY

EVENT: Learning Through Clay – Exploring the Human Digestive System
DATE: 4 November 2026
CONDUCTED BY: Class 7C

The students of Class VII-C explored the human digestive system through an engaging clay-modelling activity. Using clay, they created models of the digestive organs, gaining a better understanding of their arrangement and functions.

The hands-on experience encouraged creativity, active participation and experiential learning, making the concept more engaging and easier to understand. It was a wonderful blend of scientific exploration and artistic expression.
