

School Report: Administration of Psychometric Test.

The Air Force School conducted psychometric assessments from December 13 to 19, 2024 for class X students as part of a comprehensive initiative to assist them in selecting suitable academic streams. The program aimed to provide students with personalized guidance by evaluating their intellectual capabilities, areas of interest, and personality traits. The sessions were facilitated by the school counselor, Mrs. Anjela Dahiya, who ensured that the testing environment was supportive and encouraging. Each student participated actively, showcasing curiosity and enthusiasm throughout the process. The students expressed genuine interest in learning more about their abilities and eagerly awaited the results. This engagement highlighted the effectiveness of the initiative in fostering self-reflection and motivation among the participants. The primary objective of the program was to guide students toward streams—science, commerce, or humanities—that best matched their profiles. The results of the assessments provided a detailed analysis, helping students and their parents make well-informed decisions about their academic future. Additionally, the initiative emphasized the importance of understanding one's strengths and aligning them with educational goals, thereby reducing the stress and confusion often associated with stream selection.

Feedback from the students was overwhelmingly positive, with many expressing their enjoyment of the process. The tests not only provided valuable insights but also encouraged students to think critically about their future aspirations. The program also served as a platform for students to explore their potential, gain confidence, and feel supported in their academic journey. By integrating psychometric assessments into its guidance framework, the school ensured that students were equipped with the necessary tools to make confident and informed decisions.

Overall, the psychometric testing program successfully achieved its objectives, helping students gain clarity about their academic strengths, interests, and personality traits.
