MATHS

1. The Place Value "Sliding" Machine

The Task: Create a physical slider using cardboard and paper strips to demonstrate how numbers change when moved across place value columns (Ones, Tens, Hundreds, Thousands, etc.).

What to make: Use a shoe box lid. Cut four to six vertical slits. Thread paper strips numbered 0–9 through them so students can "set" a number.

2. The 3D Shape City

The Task: Build a miniature city using only 3D geometric shapes (nets).

What to make: Construct houses from cubes/cuboids, towers from cylinders, and roofs from pyramids or cones. Label the number of faces, edges, and vertices on each building.

3. GEOBOARD (Area and Perimeter)

The Task: Create a DIY geoboard to explore shapes and their boundaries.

What to make: Take a square piece of wood or heavy cardboard.

Mark a grid of dots (5×5 or 10×10) and push pins or thumbtacks into each dot. Use colorful rubber bands to stretch across the pins to create squares, rectangles, and triangles.

Activity: Count the "units" along the rubber band for perimeter and the "squares" inside for area.
